5.2.1 Detailed Description

dependency :

this library use the folowing ones : ZMCP23017, ZPCA9685, PinExtender,Rosserial_Arduino_Library you can find it on <https://github.com/zoubworldArduino/>

description

This lib support a board called Motor2-A based on MCP23017 and PCA9685 with a L9110 as power stage. This board offers 16 motor channels 5-12V up to 5/800mA. Each channel have 2 pin, one where we can apply LOW or HIGH level thanks to digitalWrite(), and one where we can apply PWM value thanks to analogWrite() The pin can be identify by the generic name like `PIN_MOTOR2_IO_0` `PIN_MOTOR2_PWM_0`, in this case you have to do `instanceBoard.digitalWrite(PIN_MOTOR2_IO_0,LOW)` The pin can be identify by the instance name like `pin=instanceBoard.getpin(PIN_MOTOR2_IO_0)` or `pin=instanceBoard.getpinlo(MOTOR2_0)` or or `pin=instanceBoard.getpinPwm(MOTOR2_0)`, in this case you have to do `digitalWrite(pin,LOW)`; from arduino API, this offer a compatibility with any library, but before you should link your board to arduino API by calling `setPinExtender(&instanceBoard)`; if you have 2 board, then do it :`instanceBoard.setPinExtender(&instanceBoard_2)`;

generic name is used inside the instance of board, and the instance pin name allow to use generic arduino IPA, it content on it the I2C adresse of the device and the channel. note that `instanceBoard.getpin()` must be called after `instanceBoard` creation and initialisation with `begin()`, the pin number is a 32bit number.

The `cmd(channel, pwm)` function allow to manage easily the motor control, channel is between 0 and 15 like on skillprint of the board. The pwm value is between -4096 and 4095, 0 give no power.

The name `PIN_MOTOR2_IO_0` can be replace by `MOTOR2_IO[0]`. The name `PIN_MOTOR2_PWM_0` can be replace by `MOTOR2_PWM[0]`.

Release A of board:

- a bug on the board limit the channel to the even only, so only 8 channel
- note the True table of L9110 isn't as written in datasheet :

Input A	input B	output A	output B
0	0	LOW	LOW
0	1	LOW	HIGH
1	0	HIGH	LOW
1	1	LOW	LOW

but

Input A	input B	output A	output B
0	0	HIGH IMPEDENCE	HIGH INPEDENCE
0	1	LOW	HIGH
1	0	HIGH	LOW
1	1	HIGH IMPEDENCE	HIGH IMPEDENCE

Release B of board: the bug is fix but the library must be differents.
